

CASE STUDY ::> TARGET APPLICATION

Marine Vessels

LINE-X
PROTECTIVE COATINGS

THE SITUATION

Marine vessels and pleasure craft are constantly battling wet and slippery floors, stains and rot. Routine maintenance, re-painting, and resurfacing are often required to keep ahead of those problems.

Customers in the boating market demand quality and safety for their investments.

THE SOLUTION

LINE-X coatings are applied to create a single, impenetrable barrier to shield against nature's harshest elements, such as high humidity, salt water or extreme temperature changes.

Because LINE-X forms permanent bonds at the molecular level, they have excellent adhesion to a wide variety of surfaces including wood and fiberglass. LINE-X can absorb impact and resist damage by remaining both flexible and strong without losing adhesion.

When applied over a properly prepared substrate, a LINE-X coating will eliminate soiling and slipping issues, stale water odors, as well as provide chemical resistance and UV protection from fading or discoloration.

THE RESULTS

With limited down time and reduced future maintenance costs, an eye pleasing, seamless, water tight coating is set in place. LINE-X provides an easy to clean surface which does not trap contaminants or water. With LINE-X, boats are protected against weathering and abuse.

LINE-X Benefits:

- Aesthetics - no fading or discoloration
- Water tight
- Worry-free, low maintenance
- Slip-resistance
- Enhanced durability
- Prevent leaks, rust, corrosion
